The following information is for technical support purposes only:

Lab Instance: 10277521

You plan to generate large amounts of real-time data that will be copied to Azure Blob storage.

You plan to create reports that will read the data from an Azure Cosmos DB database.

You need to create an Azure Stream Analytics job that will input the data from a blob storage named storage10277521 to the Cosmos DB database.

To complete this task, sign in to the Azure portal.

**Answer:**

Explanation:

See the explanation below.

Explanation

Step 1: Create a Stream Analytics job

1. Sign in to the Azure portal.

2. Select Create a resource in the upper left-hand corner of the Azure portal.

3. Select Analytics > Stream Analytics job from the results list.
4. Fill out the Stream Analytics job page.
5. Check the Pin to dashboard box to place your job on your dashboard and then select Create.
6. You should see a Deployment in progress... notification displayed in the top right of your browser window.

Step 2: Configure job input

1. Navigate to your Stream Analytics job.
2. Select Inputs > Add Stream input > Azure Blob storage
3. In the Azure Blob storage setting choose: storage10277521. Leave other options to default values and select Save to save the settings.

#### **NEW QUESTION: 3**

Which type of zoning does NetApp recommend?

- A. World Wide Node Name zoning
- B. World Wide Port Name zoning
- C. Switch World Wide Name zoning
- D. World Wide Name zoning

**Answer: B**

#### **NEW QUESTION: 4**

Which two tasks are required for configuring SNMP to send traps on a Cisco IOS device? (Choose two.)

- A. Configure SNMP server group names.
- B. Configure SNMP status monitoring and troubleshooting.
- C. Configure the SNMP agent.
- D. Configure the SNMP server engine ID.
- E. Configure SNMP notifications.
- F. Create access controls for an SNMP community.

**Answer: E,F**

Explanation:

The best current practices recommend applying Access Control Lists (ACLs) to community strings and ensuring that the requests community strings are not identical to notifications community strings. Access lists provide further protection when used in combination with other protective measures. This example sets up ACL to community string:

```
access-list 1 permit 1.1.1.1 snmp-server community string1 ro 1
```

A key feature of SNMP is the ability to generate notifications from an SNMP agent. These notifications do not require that requests be sent from the SNMP manager. Unsolicited (asynchronous) notifications can be generated as traps or

inform requests. Traps are messages alerting the SNMP manager to a condition on the network. Inform requests (informs) are traps that include a request for confirmation of receipt from the SNMP manager. Notifications can indicate improper user authentication, restarts, the closing of a connection, loss of connection to a neighbor router, or other significant events. Reference:
