Explanation

Box 1: Join the VMs to a new domain controller VM in Azure. Azure provides two solutions for implementing directory and identity services in Azure:

This architecture is more common when the on-premises network and the Azure virtual network (VNet) are connected by a VPN or ExpressRoute connection.

* Use Azure AD to create an Active Directory domain in the cloud and connect it to your on-premises Active Directory domain. Azure AD Connect integrates your on-premises directories with Azure AD.

Box 2: Set up VPN connectivity.

This architecture is more common when the on-premises network

and the Azure virtual network (VNet) are connected by a VPN or ExpressRoute connection.
