The second one is its professional service, We are legal authorized company devoting to researching and selling professional IBM C1000-147 examcollection many years.

The panacea for busy workers without much preparation, Our C1000-147 training materials: IBM Cloud Pak for Integration v2021.4 Solution Architect are useful to customers at all level, which means you can master the important information and remember it effectively.

NEW QUESTION: 1

Which component of ITIL pertains to planning, coordinating, executing, and validating changes and rollouts to production environments?

- A. Change management
- B. Problem management
- C. Availability management
- D. Release management

Answer: D

Explanation:

Release management involves planning, coordinating, executing, and validating changes and rollouts to the production environment. Change management is a higher-level component than release management and also involves stakeholder and management approval, rather than specifically focusing the actual release itself. Availability management is focused on making sure system resources, processes, personnel, and toolsets are properly allocated and secured to meet SLA requirements. Problem management is focused on identifying and mitigating known problems and deficiencies before they occur.

NEW QUESTION: 2

A BPM analyst is reviewing the playback types. What is the first playback that identifies participant roles?

- A. Playback 1
- B. Playback 2
- C. Playback 0
- D. Playback 3

Answer: C

NEW QUESTION: 3

Which three events occur when a hub node fails in an Oracle Clusterware 12c Flex Cluster?

- A. The hub node is evicted from the cluster
- B. Cluster resources running on the failed hub node are relocated to one or more surviving leaf nodes.
- C. Cluster resources running on the failed hub node are relocated to one or more surviving hub nodes or leaf nodes, or both.
- D. Leaf nodes connected to the failing hub node are reconnected to a surviving hub node without service disruption.
- E. Cluster resources running on leaf nodes connected to the failed hub node are relocated to one or more surviving leaf nodes.
