- A. Does not support LAN-free backup
- B. Requires a NetWorker client on each virtual machine
- C. Requires a storage node on the VCB backup proxy
- D. Supports image and file-based backups

Answer: D

NEW QUESTION: 3

A factor purchases an entity's accounts receivable and assumes the risk of collection.

- A. The seller receives money immediately to reinvest in new inventories.
- B. The financing cost is usually high: about 2 points or more above prime, plus a fee for collection.
- C. Factoring has been traditional in the textile industry for years, and recently companies in many industries have found it an efficient means of operation.
- D. An entity that uses a factor can eliminate its credit department, accounts receivable staff, and bad debts.

Answer: C

Explanation:

A factor purchases an entity's accounts receivable and assumes the risk of collection. The seller receives money immediately to reinvest in new inventories. The financing cost is usually high: about 2 points or more above prime, plus a fee for collection. Factoring has been traditional in the textile industry for years, and recently companies in many industries have found it an efficient means of operation. An entity that uses a factor can eliminate its credit department, accounts receivable staff, and bad debts. These reductions in costs can more than offset the fee charged by the factor, which can often operate more efficiently than its clients because of the specialized nature of its service.
