NEW QUESTION: 1

Where is the RJ45 MSR connector located on the IBM SurePOS 5x5?

- A. integrated into the system unit (tower) behind the display panel
- B. integrated into the right side of the system unit (tower) as it is facing the operator
- C. on therear connector panel
- D. on the back side of the display panel

Answer: D

NEW QUESTION: 2

If two phones share a line between them, what happens if the user of the first phone is using the line and the user of the second phone uses the Barge feature?

- A.** The user on the first phone is knocked off the line, and the second phone user takes over the line.
- B.** A three-way conference begins.
- C.** The call is discontinued, but the first phone user and the second phone user are able to talk.
- D.** The user of the first phone is notified of the Barge request.

Answer: B

Explanation:

Barge and Privacy

The Single Button Barge/cBarge, Barge, Privacy, and Privacy on Hold features work with each other. These features work with only shared lines.

Barge adds a user to a call that is in progress. Pressing a softkey automatically adds the user (initiator) to the shared-line call (target), and the users currently on the call receive a tone (if configured). Barge supports built-in conference and shared conference bridges.

The Single Button Barge/cBarge feature allows the user to simply press the shared-line button to be added to the call.

The Single Button Barge/cBarge feature supports built-in conferences and shared conference bridges.

The administrator enables or disables privacy and privacy on hold features. Privacy must be enabled for a device to activate privacy on hold. Users toggle the privacy feature on or off. The administrator enables or disables Privacy setting. When Privacy is enabled, the system removes the call information from all phones that share lines and blocks other shared lines from barging in on its calls. When Privacy is disabled, the system displays call information on all phones that have shared line appearances and allows other shared lines to barge in on its calls. Administrators can configure Privacy for all devices or configure Privacy for each device. Users toggle the Privacy feature on or off.

The privacy on hold feature preserves privacy when a private call on a shared line is put on hold. When privacy on hold is enabled, the calling name and number that are blocked when privacy is enabled remain blocked when the call is put on hold, and the system blocks other shared lines from resuming the held call. When privacy on hold is disabled and a private call is put on hold, the system displays calling name and number on all phones that have shared line appearances and allows other shared lines to resume the held call.

If privacy on hold is enabled, users can activate the feature while the call is on hold by toggling privacy on; likewise, users can deactivate privacy on hold by toggling privacy off while the call is on hold. If privacy on hold is disabled, toggling privacy on or off does not affect the held call.

If a private call is put on hold, retrieved at the same phone,

and privacy is then toggled off, the system displays the call information on all phones that have shared line appearances but does not allow another phone to resume or barge the held call. Administrators can configure privacy for all devices or for each device. Administrators configure privacy on hold for the cluster.
