For most IT certification candidates, passing SAP prep4sure exam [Valid MB-800 Exam Camp Pdf](#) is long and hard work, No help, full refund!, Enjoy practicing with our great exam simulator on your desktop computer or mobile device.

NEW QUESTION: 1

You want to add an account for a new storage administrator on a Hitachi Unified Storage system using Storage Navigator Modular 2. Which Account Authentication role must you have to be able to perform this task?

- A. Storage Administrator (View and Modify)
- B. Account Administrator (View and Modify)

- C. Authentication Administrator (View and Modify)
- D. Security Administrator (View and Modify)

Answer: B

NEW QUESTION: 2

You have a Skype for Business Server 2015 infrastructure. The infrastructure contains one central site. The infrastructure contains a Standard Edition server that has the Mediation Server role installed and is located in the central site.

You configure a trunk to an IP-PBX which is qualified for integration with Skype for Business.

You have 300 users who are enabled for Enterprise Voice. You need to provide public switched telephone network (PSTN) services to the Enterprise Voice users if the IP-PBX fails. What should you do?

- A. Install a PSTN gateway that connects directly to the PSTN. Configure a new trunk to the new PSTN gateway. Create a new route and a new PSTN usage. Add the route to the PSTN usage and add the PSTN usage to the voice policy.
- B. Install a Survivable Branch server that connects directly to the PSTN. Configure a new trunk and add the trunk to the existing route. Add the route to the PSTN usage and add the PSTN usage to the voice policy.
- C. Install an additional IP-PBX that connects directly to the PSTN. Configure the existing trunk to use both IP-PBXs in resiliency mode.
- D. Install a new trunk to a certified SIP trunk provider. Add the trunk to the existing PSTN usage. Add the PSTN usage to the voice policy.

Answer: A

NEW QUESTION: 3

Sie müssen eine Transact-SQL-Anweisung entwickeln, die die folgenden Anforderungen erfüllt:

- Die Anweisung muss einen benutzerdefinierten Fehler zurückgeben, wenn beim Aktualisieren einer Tabelle Probleme auftreten.
- Die Fehlernummer muss den Wert 50555 haben.
- Der Schweregrad des Fehlers muss 14 sein.
- Eine Microsoft SQL Server-Warnung muss ausgelöst werden, wenn die Fehlerbedingung auftritt.

Welches Transact-SQL-Segment sollten Sie für jede Anforderung verwenden? Wählen Sie zum Beantworten die entsprechenden Transact-SQL-Segmente im Antwortbereich aus.

Answer:

Explanation:

Explanation

Box 1: TRY...CATCH

The TRY...CATCH Transact-SQL construct implements error handling for Transact-SQL that is similar to the exception handling in the Microsoft Visual C# and Microsoft Visual C++ languages. A group of Transact-SQL statements can be enclosed in a TRY block. If an error occurs in the TRY block, control is passed to another group of statements that is enclosed in a CATCH block.

Box 2: RAISERROR(50555, 14, 1 'The update failed.') WITH LOG

We must use RAISERROR to be able to specify the required severity level of 14, and we should also use the LOG option, which Logs the error in the error log and the application log for the instance of the Microsoft SQL Server Database Engine, as this enable a MS MS SQL SERVER alert to be triggered.

Note: RAISERROR generates an error message and initiates error processing for the session. RAISERROR can either reference a user-defined message stored in the sys.messages catalog view or build a message dynamically. The message is returned as a server error message to the calling application or to an associated CATCH block of a TRY...CATCH construct.

NEW QUESTION: 4

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Yes

Azure Monitor maximizes the availability and performance of your applications and services by delivering a comprehensive solution for collecting, analyzing, and acting on telemetry from your cloud and on-premises environments.

Box 2: Yes

Alerts in Azure Monitor proactively notify you of critical conditions and potentially attempt to take corrective action.

Box 3: Yes

Azure Monitor uses Target Resource, which is the scope and signals available for alerting. A target can be any Azure resource. Example targets: a virtual machine, a storage account, a virtual machine scale set, a Log Analytics workspace, or an Application Insights resource.
