Just be confident, You may be working hard **C_THR94_2205 Brain Dumps** day and night because the test is so near and you want to get a good result.

NEW QUESTION: 1

A website locks a user's account after three unsuccessful login attempts. This precaution prevents which of the following?

- A. Password cracking
- B. Phishing
- C. Spam
- D. Shoulder surfing

Answer: A

NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2 and has the Hyper-V server role installed.

On Server1, you create and start a virtual machine named VM1. VM1 is configured as shown in the following table.

You plan to create a checkpoint of VM1.

You need to recommend a solution to minimize the amount of disk space used for the checkpoint of VM1.

What should you do before you create the checkpoint?

- A. Decrease the Maximum RAM.
- B. Run the Resize-VHD cmdlet.
- C. Convert Disk1.vhd to a dynamically expanding disk.
- D. Run the Stop-VM cmdlet.

Answer: D

Explanation:

For checkpoints created when the virtual machine is stopped

The checkpoint contains the state of the hard disks only.

For checkpoints created when the virtual machine is running

The checkpoint contains the state of the hard disks and the data in memory.

Note: A checkpoint saves the state of each virtual hard disk that is attached to a virtual machine and all of the hard disk's contents, including application data files. For virtual machines on Hyper-V and VMware ESX Server hosts, a checkpoint also saves the hardware configuration information. By creating checkpoints for a virtual machine, you can restore the virtual machine to a previous state.

NEW QUESTION: 3

You are designing a Windows Azure application.

The application contains one web role and three worker roles.

You need to recommend an approach for updating only one role without interrupting the other roles.

What should you recommend?

- A. Delete the current deployment and then redeploy the application.
- B. Copy the cloud package to blob storage and then restart the service.
- C. Perform a VIP swap.
- D. Perform an in-place upgrade.

Answer: D

Explanation:

I checked and I had https for endpoint along with port (443) and thumbprint for the certificate. I went and redid the whole thing and it works now, it seems for some reason CName entry was gone from GoDaddy (not sure if taking down the web service has got to do somethign with it).

NEW QUESTION: 4

What is the disadvantage of using the command kill -9 ?

- A. A core dump file will be created.
- B. The affected process is unable to clean up before exiting.
- C. The action can be blocked by buggy or malicious processes.
- D. It makes excessive use of system resources.
- E. It affects the entire process group.

Answer: B

Explanation:

Topic 2, Volume B
