#### **NEW QUESTION: 2**

You have a hybrid deployment of Azure Active Directory (Azure AD) that contains the users shown in the following table.

You need to modify the JobTitle and UsageLocation attributes for the users.

For which users can you modify the- attributes from Azure AD? To answer, select the appropriate options in the answer area.

**Answer:**

Explanation:

**NEW QUESTION: 3**

Sie haben mehrere virtuelle Windows Server- und Ubuntu Linux-Maschinen (VMs), die auf zwei virtuelle Netzwerke (VNETs) verteilt sind:

- prod-vnet-west (West-US-Region)
- prod-vnet-east (Region Ost-USA)

Sie müssen den VMs in beiden VNet-Netzwerken erlauben, eine Verbindung herzustellen und Ressourcen gemeinsam zu nutzen, indem Sie nur das Azure-Backbone-Netzwerk verwenden.

Ihre Lösung muss Kosten, Komplexität und Bereitstellungszeit minimieren.

Was tun?

- A.** Stellen Sie ein virtuelles privates VNet-zu-VNet-Netzwerk (VPN) bereit.
- B.** Erstellen Sie eine private Zone in Azure DNS.
- C.** Konfigurieren Sie das Peering zwischen prod-vnet-west und prod-vnet-east.
- D.** Fügen Sie jedem VNet einen Service-Endpunkt hinzu.

**Answer: C**

Explanation:

Erläuterung:

Sie sollten das Peering zwischen prod vnet west und prod vnet east konfigurieren. Durch Peering können VMs in zwei verschiedenen Azure-VNets logisch gruppiert werden, um Ressourcen zu verbinden und gemeinsam zu nutzen. Traditionelles VNet-Peering umfasst zwei VNets in derselben Region.

Globales VNet-Peering, das im Sommer 2018 allgemein verfügbar ist, unterstützt jedoch VNets, die in allen öffentlichen Azure-Regionen verteilt sind.

Sie sollten kein VNet VNet VPN bereitstellen. Erstens bedeutet globales VNet-Peering, dass Sie kein VPN-Gateway mehr verwenden müssen, um VNets in verschiedenen Azure-Regionen zu verbinden. Zweitens erfordert das Szenario, dass Sie Kosten und Komplexität minimieren.

Sie sollten keine private Zone in Azure DNS erstellen. Diese Aktion ist erforderlich, damit Ressourcen in Peer-VNets die DNS-Hostnamen der jeweils anderen Person auflösen können. In diesem Szenario ist jedoch keine Auflöserung des privaten Hostnamens erforderlich.

Sie sollten nicht jedem VNet einen Dienstendpunkt hinzufügen. Mit Service-Endpunkten können Sie den Zugriff auf bestimmte Azure-Ressourcen, z. B. Speicherkonten und Azure SQL-Datenbanken, auf Ressourcen beschränken, die sich in einem einzelnen VNet befinden. Daher kann diese Funktion nicht zum Verknüpfen von zwei VNets als Szenariomandat verwendet werden.
