#### **NEW QUESTION: 1**

A number of virtual machines in a vSphere 5.5 DRS cluster are connected to the same virtual switch port group. After several of these VMs are migrated to another host, an administrator notices that they have lost network connectivity. The Events tab in vCenter Server shows this error message:

Failed to initialize ethernet0.

The vmkernel log file on the host running the affected VMs contains this message:

Can't connect device:'port group name': Out of resources.

Which caused this issue?

**A.** There were insufficient uplinks configured on the virtual switches.

**B.** Network I/O Control was enabled.

- C. The DRS cluster containing the VMs was set to Fully Automated with the Migration Threshold set to Conservative.
- D. The virtual switch port allocation was changed from the default setting.

**Answer: D**

**NEW QUESTION: 2**

You have a group Managed Service Account named Service01. Three servers named Server01, Server02, and Server03 currently use the Service01 service account.

You plan to decommission Server01.

You need to remove the cached password of the Service01 service account from Server01. The solution must ensure that Server02 and Server03 continue to use Service01.

Which cmdlet should you run?

- A. Remove-ADServiceAccount
- B. Reset-ADServiceAccountPassword
- C. Set-ADServiceAccount
- D. Uninstall-ADServiceAccount

**Answer: B**

Explanation:

Explanation

We reset the password for the service.

The Reset-ADServiceAccountPassword cmdlet resets the service account password for the local computer.

This cmdlet needs to be run on the computer where the service account is installed.

Incorrect:

Not A: The Set-ADServiceAccount cmdlet cannot modify the password of the service.

Reference: Reset-ADServiceAccountPassword
