In the future, if the system updates, we will still automatically send the latest version of our DES-6322 learning questions to the buyer's mailbox.

NEW QUESTION: 1

You have begun an upgrade to an existing Motorola WLAN that supports 802.11b/g clients only on channel 6. As a test, you have configured an independent AP7131 and set the 2.4 GHz radio to use channel 11- (eleven minus). While performing a throughput test from a laptop PC to the new AP650 you begin to receive complaints from the customer's users that their connection speeds have dropped significantly and in some cases they have even lost their connections completely. They have

accused you and the new system of causing the service disruptions. Which of the following is MOST likely in this situation?

- A. You have physically placed the new AP too close to the existing APs. You ARE responsible for the disruption.
- B. You have configured Channel Bonding in 2.4 GHz. You ARE responsible for the disruption.
- C. Since no WIPS is in use, there could be rogue devices nearby initiating a Denial of Service (DoS) attack against the Customers WLAN. You are NOT responsible for the disruption.
- D. You have properly configured a non-overlapping channel. You are NOT responsible for the disruption.
- E. You have forgotten to disable Greenfield mode. You ARE responsible for the disruption.
- F. You have properly installed compatibility options on the 802.11n AP. You are NOT responsible for the disruption.

Answer: B
