Explanation

Amazon Inspector offers a programmatic way to find security defects or misconfigurations in your operating systems and applications. Because you can use API calls to access both the processing of assessments and the results of your assessments, integration of the findings into workflow and notification systems is simple.

DevOps teams can integrate Amazon Inspector into their CI/CD pipelines and use it to identify any pre-existing issues or when new issues are introduced.

Option A.C and D are all incorrect since these services cannot check for Security Vulnerabilities. These can only be checked by the AWS Inspector service.
