#### **NEW QUESTION: 1**

Scenario:

You work for SWITCH.com. They have just added a new switch (SwitchB) to the existing network as shown in the topology diagram.

RouterA is currently configured correctly and is providing the routing function for devices on SwitchA and SwitchB. SwitchA is currently configured correctly, but will need to be modified to support the addition of SwitchB. SwitchB has a minimal configuration. You have been tasked with competing the needed configuring of SwitchA and SwitchB. SwitchA and SwitchB use Cisco as the enable password.

Configuration Requirements for SwitchA

- \* The VTP and STP configuration modes on SwitchA should not be modified.

- \* SwitchA needs to be the root switch for vlans 11, 12, 13, 21, 22 and 23.

All other vlans should be left are their default values.

Configuration Requirements for SwitchB

- \* Vlan 21

- \* Name: Marketing

- \* will support two servers attached to fa0/9 and fa0/10

- \* Vlan 22

- \* Name: Sales

- \* will support two servers attached to fa0/13 and fa0/14

- \* Vlan 23

- o Name: Engineering

- o will support two servers attached to fa0/15 and fa0/16

- \* Access ports that connect to server should transition immediately to forwarding state upon detecting the connection of a device.
- \* SwitchB VTP mode needs to be the same as SwitchA.
- \* SwitchB must operate in the same spanning tree mode as SwitchA
- \* No routing is to be configured on SwitchB
- \* Only the SVI vlan 1 is to be configured and it is to use address 192.168.1.11/24 Inter-switch Connectivity Configuration Requirements
- \* For operational and security reasons trunking should be unconditional and Vlans 1, 21, 22 and 23 should tagged when traversing the trunk link.
- \* The two trunks between SwitchA and SwitchB need to be configured in a mode that allows for the maximum use of their bandwidth for all vlans. This mode should be done with a non-proprietary protocol, with SwitchA controlling activation.
- \* Propagation of unnecessary broadcasts should be limited using manual pruning on this trunk link.

### **NEW QUESTION: 2**

Crackers today are MOST often motivated by their desire to:

- A.** Seeing how far their skills will take them.
- B.** Gaining Money or Financial Gains.
- C.** Help the community in securing their networks.
- D.** Getting recognition for their actions.

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

A few years ago the best choice for this question would have been seeing how far their skills can take them. Today this has changed greatly, most crimes committed are financially motivated. Profit is the most widespread motive behind all cybercrimes and, indeed, most crimes- everyone wants to make money.

Hacking for money or for free services includes a smorgasbord of crimes such as embezzlement, corporate espionage and being a "hacker for hire". Scams are easier to undertake but the likelihood of success is much lower. Money-seekers come from any lifestyle but those with persuasive skills make better con artists in the same way as those who are exceptionally tech-savvy make better "hacks for hire".

"White hats" are the security specialists (as opposed to Black Hats) interested in helping the community in securing their networks.

They will test systems and network with the owner authorization. A Black Hat is someone who uses his skills for offensive purpose. They do not seek authorization before they attempt to comprise the security mechanisms in place. "Grey Hats" are people who sometimes work as a White hat and other times they will work as a "Black Hat", they have not made up their mind yet as to which side they prefer to be. The following are incorrect answers: All the other choices could be possible reasons but the best one today is really for financial gains.

### **NEW QUESTION: 4**

What are three benefits of using a few large-capacity LUNs instead of many small-capacity LUNs? (Choose three.)

- A. More flexibility for resizing virtual disks.
- B. Less wasted storage space.
- C. Better performance because there is less contention for a single volume.
- D. More flexibility to create virtual machines without adding new LUNs.
- E. Fewer VMFS datastores to manage.

**Answer: A,D,E**

Explanation:

Explanation

You might want fewer, larger LUNs for the following reasons:
