NEW QUESTION: 3

You plan to deploy logical Azure SQL Database servers to the East US Azure region and the West US Azure region. Each server will contain 20 databases. Each database will be accessed by a different user who resides in a different on-premises location. The databases will be configured to use active geo-replication. You need to recommend a solution that meets the following requirements:

- * Restricts user access to each database
 - * Restricts network access to each database based on each user's respective location
 - * Ensures that the databases remain accessible from client applications if the local Azure region fails
- What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
