NEW QUESTION: 2

What automates the process of creating and maintaining a

business application?

- A. Application descriptors
- B. DefaultLevel3 profile
- C. Component descriptors module
- D. Custom server template

Answer: A

NEW QUESTION: 3

The principle of evaporator is to convert refrigerant from liquid to gas, take away the heat of the object to be refrigerated, to achieve refrigeration.

- A. True
- B. False

Answer: A

NEW QUESTION: 4

When submitting a passphrase for authentication, the passphrase is converted into ...

- A. a virtual password by the system.
- B. a new passphrase by the system.
- C. a real password by the system which can be used forever.
- D. a new passphrase by the encryption technology

Answer: A

Explanation:

Passwords can be compromised and must be protected. In the ideal case, a password should only be used once. The changing of passwords can also fall between these two extremes. Passwords can be required to change monthly, quarterly, or at other intervals, depending on the criticality of the information needing protection and the password's frequency of use. Obviously, the more times a password is used, the more chance there is of it being compromised. It is recommended to use a passphrase instead of a password. A passphrase is more resistant to attacks. The passphrase is converted into a virtual password by the system. Often time the passphrase will exceed the maximum length supported by the system and it must be truncated into a Virtual Password.
