Explanation:

Compatibility Requirements

When you add an interface to a channel group, Cisco NX-OS checks certain interface attributes to ensure that the interface is compatible with the channel group. Cisco NX-OS also checks a number of operational attributes for an interface before allowing that interface to participate in the port-channel aggregation.

The compatibility check includes the following operational attributes:

- \* Port mode
- \* Access VLAN
- \* Trunk native VLAN
- \* Allowed VLAN list
- \* Speed
- \* 802.3x flow control setting
- \* MTU

The Cisco Nexus 5000 Series switch only supports system level MTU. This attribute cannot be changed on an individual port basis.

- \* Broadcast/Unicast/Multicast Storm Control setting
- \* Priority-Flow-Control
- \* Untagged CoS

Use the show port-channel compatibility-parameters command to see the full list of compatibility checks that Cisco NX-OS uses.
