**NEW QUESTION: 2**

You manage a sales database that uses the full recovery model. You use the following backup schedule:

The date is April 15, 2018. A developer creates a transaction named modificationtest and runs the transaction at 9:20 AM. You determine that the change implemented by the transaction

assets. They need to protect key assets from both external and internal threats. This security in depth approach is meant to sustain attacks even when perimeter and traditional controls have been breached.

In this question, using two firewalls to secure the DMZ from both external and internal attacks is the best approach. Having each firewall managed by a separate administrator will reduce the chance of a configuration error being made on both firewalls. The remote logging will enable incident reconstruction.

Incorrect Answers:

B: Depending on the number of interfaces on the firewall, you could protect from external and internal threats with a single firewall although two firewalls is a better solution. However, it is not practical to have separate interfaces on the same firewall managed by different administrators. The firewall rules work together in a hierarchy to determine what traffic is allowed through each interface.

C: A SaaS based firewall can be used to protect cloud resources. However, it is not the best solution for protecting the network in this question.

D: A virtualized firewall could be used. However, multiple instances of the same firewall should be identical. They should not be configured separately by different administrators.
