mailbox the first time.

**NEW QUESTION: 1**

The Identity Agent is a lightweight endpoint agent that authenticates securely with Single Sign-On (SSO). What is not a recommended usage of this method?

- A. Protecting highly sensitive servers
- B. When accuracy in detecting identity is crucial
- C. Leveraging identity for Data Center protection
- D. Identity based enforcement for non-AD users (non-Windows and guest users)

**Answer: D**

**NEW QUESTION: 2**

You plan to automate the deployment of a virtual machine scale set that uses the Windows Server 2016 Datacenter image. You need to ensure that when the scale set virtual machines are provisioned, they have web server components installed. Which two actions should you perform? Each correct answer presents part of the solution.

NOTE Each correct selection is worth one point.

- A. Modify the extensionProfile section of the Azure Resource Manager template.
- B. Create an automation account.
- C. Create an Azure policy.
- D. Create a new virtual machine scale set in the Azure portal.
- E. Upload a configuration script.

**Answer: A,E**

Explanation:

Virtual Machine Scale Sets can be used with the Azure Desired State Configuration (DSC) extension handler. Virtual machine scale sets provide a way to deploy and manage large numbers of virtual machines, and can elastically scale in and out in response to load. DSC is used to configure the VMs as they come online so they are running the production software.
