NEW QUESTION: 1

The 3rd party application that your customer wants to migrate to Autonomous Database (ADB) has some specific demands like tablespace names, usernames and init.ora parameters. The decision was made to adhere to the suggested migration method using an instant client and the datapump version that was suggested (and came with it).

Which statement is true about the migration of the application's database success?

- A.** The tablespace names will result in a blocking error during datapump import because of ADB limitations.
- B.** The migration can be a success, both technically and functional due to datapump enhancements.
- C.** The suggested datapump version will create an alias for non-standard tablespace names so the migration is successful.
- D.** The migration can be technically a success but the 3-rd party vendor needs to support the result.

Answer: B

NEW QUESTION: 2

Your network contains an Active Directory forest named contoso.com. The forest contains two domains named contoso.com and child.contoso.com. The forest contains two domain controllers. The domain controllers are configured as shown in the following table.

You need to ensure that DC2 can provide authoritative responses for queries to the contoso.com namespace.

What should you do?

- A. On DC2, create a forwarder.
- B. On DC1, create a delegation.
- C. On DC2, modify the Zone Transfers settings.
- D. On DC1, change the replication scope of the contoso.com zone.

Answer: D

Explanation:

Explanation

For DC1 to be able to provide authoritative responses to DNS queries the replication scope should be changed accordingly so that it has the zone data for the contoso.com domain.

NEW QUESTION: 3

You plan to deploy an Office 365 tenant to multiple offices around the country.

You need to modify the users and groups who are authorized to administer the Rights Management service.

Which Windows PowerShell cmdlet should you run?

- A. Enable AadrmSuperUserFeature
- B. Add-MsolGroupMember
- C. Get-Add rm Role Based Administrator
- D. Remove-AadrmRoleBasedAdministrator

Answer: A

Explanation:

The Enable-AadrmSuperUserFeature cmdlet enables the super user feature. With this feature enabled, you can add or remove super users for Azure Rights Management. By default, the super users feature is not enabled, and no users are assigned to this feature.

By enabling this feature we can modify the users and groups that are able to administer the Rights Management service.

NEW QUESTION: 4

If the odds of default are 1:5, what is the probability of default?

- A. 12.00%
- B. 20.00%
- C. 50.00%
- D. 16.67%

Answer: D

Explanation:

Explanation

Odds are the ratio between the probability of the occurrence of an event to the probability that the event does not occur. If odds are H, then $p = H/(1 + H)$ and $H = p/(1-p)$. In this case the odds are 1:5, or 1/5, therefore the correct answer is Choice 'a', equal to $(1/5)/(1 + 1/5) = 1/6 = 16.67\%$. All other choices are incorrect.
