**Answer: A,B,D**

#### NEW QUESTION: 4

Your network contains an on-premises Active Directory domain named adatum.com that syncs to Azure Active Directory (Azure AD) by using the Azure AD Connect Express Settings. Password writeback is disabled.

You create a user named User1 and enter in the Password field as shown in the following exhibit.

The Azure AD password policy is configured as shown in the following exhibit.

**Answer:**

Explanation:

Explanation

Box 1: Yes

The question states that User1 is synced to Azure AD. This tells us that the short password (Pass) meets the on-premise Active Directory password policy and you were able to create the on-premise account for User1.

The on-premise Active Directory password policy applies over the Azure AD password policy for synced user accounts.

Box 2: No

Self-Service Password Reset would need to be configured.

Box 3: Yes

The password for the Azure AD User1 account will expire after 90 days according to the Azure AD password policy. If the on-premise password policy has a shorter password expiration period, User1 would have the change his/her on-premise AD password. The new password would then sync to Azure AD.
