Answer: B,C,E

Explanation:

Setting up a VPN over your Direct Connect connection will secure the data in transit. The steps to do so are: adding a VGW to the VPC; setting up a public virtual interface; and creating the IPsec tunnel between your data center and the VGW via the public virtual interface. B would send traffic over the public Internet. D is not possible because a public virtual interface is needed to announce the VGW endpoint IPs. E would not take advantage of the already existing Direct Connect connection.
