At the same time, you should be competent enough to deal with other exams not only the TMAP prep material, and we have the relevant TMAP vce practice as well.

**NEW QUESTION: 1**

Which of the following is the greatest benefit of an internal audit program to an organization?

**A.** It provides feedback for continuous improvement.

- B. It fulfills most contractual quality requirements.
- C. It prepares an organization for third-party audits.
- D. It frequently eliminates the need for external audits.

**Answer: A**

### **NEW QUESTION: 2**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You create several AI models in Azure Machine Learning Studio. You deploy the models to a production environment.

You need to monitor the compute performance of the models.

Solution: You create environment files.

Does this meet the goal?

A. Yes

B. No

**Answer: A**

### **NEW QUESTION: 3**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You have a database that contains the tables shown in the exhibit. (Click the Exhibit button.)

You review the Employee table and make the following observations:

- \* Every record has a value in the ManagerID except for the Chief Executive Officer (CEO).

- \* The FirstName and MiddleName columns contain null values for some records.

- \* The valid values for the Title column are Sales Representative, Manager, and CEO.

You review the SalesSummary table and make the following observations:

- \* The ProductCode column contains two parts: The first five digits represent a product code, and the last seven digits represent the unit price. The unit price uses the following pattern: ####.##.

- \* You observe that for many records, the unit price portion of the ProductCode column contains values.

\* The RegionCode column contains NULL for some records.  
\* Sales data is only recorded for sales representatives.  
You are developing a series of reports and procedures to support the business. Details for each report or procedure follow.

Sales Summary report: This report aggregates data by year and quarter. The report must resemble the following table.

Sales Manager report: This report lists each sales manager and the total sales amount for all employees that report to the sales manager.

Sales by Region report: This report lists the total sales amount by employee and by region. The report must include the following columns: EmployeeCode, MiddleName, LastName, RegionCode, and SalesAmount.

If MiddleName is NULL, FirstName must be displayed.

If both FirstName and MiddleName have null values, the word Unknown must be displayed. If RegionCode is NULL, the word Unknown must be displayed.

Report1: This report joins data from SalesSummary with the Employee table and other tables. You plan to create an object to support Report1. The object has the following requirements:  
\* be joinable with the SELECT statement that supplies data for the report

\* can be used multiple times with the SELECT statement for the report

\* be usable only with the SELECT statement for the report

\* not be saved as a permanent object

Report2: This report joins data from SalesSummary with the Employee table and other tables. You plan to create an object to support Report1. The object has the following requirements:  
\* be joinable with the SELECT statement that supplies data for the report

\* can be used multiple times for this report and other reports

\* accept parameters

\* be saved as a permanent object

Sales Hierarchy report. This report aggregates rows, creates subtotal rows, and super-aggregates rows over the SalesAmount column in a single result-set. The report uses SaleYear, SaleQuarter, and SaleMonth columns as a hierarchy. The result set must not contain a grand total or cross-tabulation aggregate rows.

Current Price Stored Procedure: This stored procedure must return the unit price for a product when a product code is supplied. The unit price must include a dollar sign at the beginning. In addition, the unit price must contain a comma every three digits to the left of the decimal point, and must display two digits to the left of the decimal point. The stored procedure must not throw errors, even if the product code contains invalid data.

End of Repeated Scenario

You need to create the query to supply data for the Sales Hierarchy report.
