**NEW QUESTION: 2** Which of the following can you check by using the Separations Preview panel? Each correct answer represents a complete solution. Choose all that apply. **A.** Overprinting **B.** Rich black **C.** Ink coverage **D.** Varnishes and other coatings **Answer:**

**A, B, C, D** Explanation: You can check the following areas by using the Separations Preview panel: Varnishes and other coatings. Since varnishes are transparent, they can be difficult to preview on a screen. When a user previews a varnish separation by himself, the varnished areas appear in black. Rich black. Previewing separation allows a user to identify areas that will print as rich black, or process black (K) ink mixed with color inks for increased opacity and richer colors. Ink coverage Too much of ink on the paper can cause drying problems. Overprinting. Previewing this will allow a user to see how blending, transparency, and overprinting will appear in a color-separated output.

**NEW QUESTION: 3** You need to implement the bindings for the CheckUserContent function. How should you complete the code segment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer:** Explanation: Explanation Box 1: [BlobTrigger(..)] Box 2: [Blob(..)] Azure Blob storage output binding for Azure Functions. The output binding allows you to modify and delete blob storage data in an Azure Function. The attribute's constructor takes the path to the blob and a FileAccess parameter indicating read or write, as shown in the following example: [FunctionName("ResizeImage")] public static void Run([BlobTrigger("sample-images/{name}")] Stream image, [Blob("sample-images-md/{name}", FileAccess.Write)] Stream imageSmall) {} Scenario: You must create an Azure Function named CheckUserContent to perform the content checks. The company's data science group built ContentAnalysisService which accepts user generated content as a string and returns a probable value for inappropriate content. Any values over a specific threshold must be reviewed by an employee of Contoso, Ltd. Reference: <https://docs.microsoft.com/en-us/azure/azure-functions/function-s-bindings-storage-blob-output>

**NEW QUESTION: 4** Your company is a hosting provider that provides cloud-based services to multiple customers. Each customer has its own Active Directory forest located in your company's

datacenter. You plan to provide VPN access to each customer. The VPN solution will use RADIUS for authentication services and accounting services. You need to recommend a solution to forward authentication and accounting messages from the perimeter network to the Active Directory forest of each customer. What should you recommend? More than one answer choice may achieve the goal. Select the BEST answer. **A.** A RADIUS server for each customer and a RADIUS proxy for each customer **B.** One RADIUS proxy and one Active Directory Lightweight Directory Services (AD LDS) instance for each customer **C.** One RADIUS proxy for each customer and Active Directory Federation Services (AD FS) **D.** A RADIUS server for each customer and one RADIUS proxy **Answer: D**

**Explanation:** RADIUS proxy You want to provide RADIUS authentication and authorization for outsourced service providers and minimize intranet firewall configuration. An intranet firewall is between your perimeter network (the network between your intranet and the Internet) and intranet. By placing an NPS server on your perimeter network, the firewall between your perimeter network and intranet must allow traffic to flow between the NPS server and multiple domain controllers. By replacing the NPS server with an NPS proxy, the firewall must allow only RADIUS traffic to flow between the NPS proxy and one or multiple NPS servers within your intranet.
