Step 1: Use the Filter Based Feature Selection module Filter Based Feature Selection identifies the features in a dataset with the greatest predictive power. The module outputs a dataset that contains the best feature columns, as ranked by predictive power. It also outputs the names of the features and their scores from the selected metric. Step 2: Build a counting transform A counting transform creates a transformation that turns count tables into features, so that you can apply the transformation to multiple datasets. Step 3: Test the hypothesis using t-Test References:
